Introduction

The Big Tick is The best and most economic solution for high quality big rolls. The high frame weight and solid pressure roller levels the soil out while cutting. The machine has a floating mount with the three point hitch on the tractor. The big roll has sharp edges due to the adjustable coulter discs mounted in front of the bottom roller. A third lift able middle coulter disc can split the rolls in two parts. A hydraulically controlled clamp can clamp the pipe where the sod is rolled on. The big tick has a heavy duty gearbox and top quality bearings for all rotating parts. The machine is equipped with a standard electrical depth adjustment.

Features

Top quality strong cutting knife (schematic drawing nr.1) (img. cutting knife).

The high frame weight and solid pressure roll levels the soil out while cutting (schematic drawing nr.2). (img. pressure roll).

Optional automatic cut off unit (schematic drawing nr.3) (img. automatic cut off unit)

Optional automatic thickness control (schematic drawing nr.4). Standard with electrical depth control (img. electrical depth adjustment)

Middle disc coultter for splitted rolls (img. middle disc coultter)

Optional auto steer unit (see Turf Tick). Hand adjustable depth control for rough adjustments (img. Hand adjustable depth control).

The length - and optional thickness of the sod can be controlled with a computer (img. Big Tick computer).

Specifications

Cutting width	48" (2 x 24") or 40" (2 x 20")
Capacity	Up to 40 meters length (approx. 50 yards)
Weight	Approximately 1100 kg
Crankshaft	Hardened steel, balanced for smooth operation.
Drive system	Hydraulic powered crankshaft with 2 hydraulic motors or mechanical powered system
Required tractor	2 - or 4-wheel driven tractor, 40 Hp minimum, category II, three point hitch
Depth control	Electrical
Options	Computer thickness control based on measurements (patented). Automatic chop off with length counter.

Price list

Big Tick / Big Roll sod harvester 40" or 48" cutting width.
Including middle disc coultter for optional splitted rolls Including mechanical gearbox blade drive.
Including electrical depth control.

On Request

Options

p.t.o. Driven hydraulic system inclusive tank, filters, gearbox, pump, electrical valve / flow control block, instead of mechanical drive.
