ECO CLIPPET®

'dedicated to offer the best mowing systems for maintaining large area turf-grass'

Eco Clipper® large area turfgrass mowers:

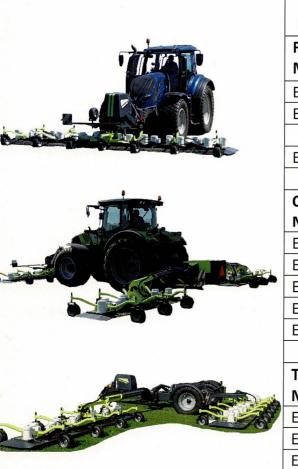

- High quality finish
- High capacity
- Contour following
- Cutting height: 20 till 90 mm
- Modular system with a choice of 2 till 14 m cutting width
- Minimal soil compaction
- Good dispersion of clippings
- Insensitive for weather conditions
- Significant fuel reduction possible
- Low noise
- Low in maintenance
- Built with experience

ECO CLIPPET ®

The base of the Eco Clipper [®] Mowing System is an independently suspended 106 cm wide section with three electrically driven rotary blades. The sections are cleverly linked together in larger, but flexible contour following mowing decks. With these decks we can configure front mowers, combined butterfly mowers and owed tri-deck mowers to a width that suits your need and tractor size.

For the front mower we fit the generator as standard on the front. On request it is possible to shift the generator to the rear of the tractor with an extra generator module EC-GEN. This is a solution for tractors without front PTO or to improve the weight distribution on small tractors.

or the combined butterfly mowers, we fit one generator as standard on the rear. On request we can also fit a senerator on the front mower. This way the front mower can be operated as a stand-alone mower without he rear section.
